Precipitation probability							
10%	10%	<05%	30%	30%	30%	40%	60%

Forecast for Tuesday 22 Sep 2020

Weather: A mainly dry start although areas of thicker cloud and fog may give some drizzly outbreaks in the morning. Some brighter periods are more likely in the east. Cloud is likely to shroud the mountain tops for much of the day with some light rain possible. A more organised band of rain is expected in the evening. The rain might be quite heavy for a short time. Becoming clearer later in the evening and feeling a lot colder.

Chance of cloud free mountain/hill tops above 700m: cloud bases will be around 7-800m with some breaks in the cloud so a 60-70% chance.

Visibility: Visibility will generally be moderate or good in the morning out with any mist and fog but becoming moderate or poor later as drizzle and light rain affect the area. Very poor in any fog.

Meteorologist's View

Gale force gusts are possible on the tops particularly from late morning. A marked change to a colder feel in the evening and a noticeable wind chill overnight.

Forecast for Wednesday 23 Sep 2020

Weather: Perhaps some early morning mist and fog but this will clear leaving a mainly dry day with long sunny intervals. Feeling fresher than previous days.

Maximum wind: Northwesterly 20-25mph but easing to 10mph during the morning.

Chance of cloud free mountain/hill tops above 700m: 90% chance of clear tops, perhaps broken cloud around the mountain tops at dawn however this will lift during the morning.

Visibility: Mainly good or very good with excellent views possible.

Temperature: **Valleys:** Plus 6 rising to 12 Celsius.
At 700m: Plus 5 Celsius.
Freezing level: Above the summits.
